

JLB Dedicated Meeting Issue

Be a part of a Special JLB Dedicated Meeting Issue!

The [Journal of Leukocyte Biology](#) (JLB, [see website](#)) will publish a cluster of articles related to topics of the [XXV National Congress of the SMI-2023](#)– both review papers and original investigations. Selected contributions will be invited soon after the completion of the conference, and all submitted manuscripts will be peer-reviewed according to the high standards of the JLB. Accepted manuscripts will be published online within 7 days of acceptance.

The JLB publishes original experimental and clinical research that provides new insights into the function of leukocytes and/or stromal cells at the molecular, structural, cellular and systemic level. The Journal scope includes all leukocytes (granulocytes, monocytes/macrophages, dendritic cells, T, B and innate lymphoid or NK/NKT cells) and/or leukocyte products together with associated stromal (endothelial, epithelial) cells studied in vitro and in the context of innate and adaptive immunity, development, homeostasis, host-pathogen interactions, immunotherapy and immunopathogenesis (in both vertebrate models and/or human studies). Pathologies of interest include immunodeficiency, autoimmunity, allergy, cancer, trauma, infections, inflammatory and iatrogenic diseases. JLB also publishes basic, translational and clinical reviews as well as commentaries on current journal content.

Participants may submit their work for the dedicated issue according to the following schedule. **When submitting, please include the name of the meeting in your cover letter.**

[Mexican Society of Immunology \(SMI\) meeting](#) – June 4-8, 2023

Invite Authors by: June 30, 2023

Authors Respond by: July 30, 2023

Authors Submit by: October 31, 2023

JLB Reviews by: December 1, 2023

Authors Revise by: February 15, 2024

JLB Re-reviews by: April 1, 2024

JLB Accepts by: April 15, 2024

ISSUE PUBLISHES: JULY 2024
